Outline / Agenda for New Windsor Workshop
Conveyor / Detour Plans & Quarry Development
May 7, 2015

The May 7, 2015 workshop will be similar in scope and design to the previous workshop held in April 2012, which was received by the community with good reviews. The community and participants will find the same workshop design as the previous April 2012 event. During the April 2012 event, the project team presented various aspects of the project phases and permitting of the New Windsor Quarry expansion and the limestone transport with separate stations representing specific topics of the project. Topic experts of the Lehigh project team represented each of the stations where the community could spend as much or as little time that they wanted as they moved freely around the room from station to station.

Now that permits have been received, the May 7, 2015 workshop will focus on the startup and construction phases of the New Windsor Quarry expansion and the limestone conveyor belt. The same format will be followed, stations with topic experts set up around the meeting room. People who attend can once again move freely from station to station depending on their project interests.

The topic stations that will be presented, at a minimum, are listed below.

Stations to be set up:

1. Detour Plans: 7 detours
2. Overall plan view of Quarry site plan showing crusher / maintenance building
3. Quarry site development
4. Conveyor path
5. Construction sequence and timetables
6. Registration table with refreshments
